**Crystal Lake Completes Drilling  
At Newmont Lake Project**

**November 2, 2018 - Vancouver, B.C.** – Crystal Lake Mining Corporation (the “Company” or “Crystal Lake”) is pleased to announce that it has completed a six-hole reverse circulation drill program at its recently optioned Newmont Lake Project in the prolific Golden Triangle. Initial assay results are expected during the second half of November.

Richard Savage, Crystal Lake President and CEO, commented: “We’re elated that we were able to complete a first-pass program so late in the season at both Burgundy Ridge, never previously drilled, and the Newmont Lake gold deposit. Crews did an exceptional job with four holes completed at Burgundy Ridge, providing an opportunity for a new discovery, and two at Newmont Lake. Visual observations of the RC chips by our geological team were highly encouraging and we eagerly anticipate assays beginning later this month.”

The Newmont Lake Project is a vastly under-explored district-scale land package (436 sq. km) with multi-commodity potential in the heart of the Eskay Rift. Crystal Lake has an option to earn a 100% interest in the project from Romios Gold Resources Ltd. (see September 24, 2018 news release).

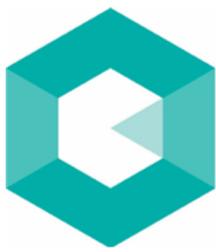

Along with drilling by Crystal Lake in October, extensive surface sampling was completed by Romios crews over the summer at various targets with results pending. In addition, a review of all historical data is being carried out by Crystal Lake which is expected to lead to exciting new geological interpretations over the coming months and a dynamic 2019 exploration program.
